

# Nuheat Cable Layout Assistant - 120V

THIS IS NOT A SPACING TOOL. The spacing between cable runs should be 3" throughout the entire installation. The distance shown in the tables below specifies the distance to install the cable off the walls.

Ensure that the Nuheat Cable is installed in areas where heating is essential (toe-kicks, immediately in front of toilet/shower/tub). DO NOT INSTALL the Nuheat Cable more than 1" from these areas. Adjustments need to be compensated in non-essential areas such as behind the toilet or behind the door.

This tool is a GENERAL GUIDELINE only.
